

As you walk around the site today, we want you to find the information we ask for on this sheet. This will be a useful help when you come to do the CREST Challenge which you'll find out about after your site visit.

1. Ask the people you meet about their jobs - find out what their job is, the qualifications they have and how many people on the site do that job.

Jobs people do	Qualifications they have	How many people do this job?

2. Can you list the sustainable techniques or adaptations you see being used in the construction process? Techniques and adaptations are things that the construction company/team does during the construction process, like choosing drainage systems that recycle rainwater, or fitting solar panels to the buildings. We've given you five boxes, but don't feel you have to fill them all.

Technique / Adaptation	What does it do?

3. Can you list the sustainable materials being used in the buildings on the site? This can be any kind of material, from lambswool insulation to recycled plastics.

Material	What does it do?
